## WEEKLY TEST MEDICAL PLUS-02 TEST - 03 Balliwala SOLUTION Date 21-07-2019

## [PHYSICS]

1. 
2. $\quad \mathrm{F}=\frac{1}{4 \pi \varepsilon_{0}} \cdot \frac{\mathrm{q}_{1} \mathrm{q}_{2}}{\mathrm{r}^{2}} ; \quad \therefore$ unit of $\varepsilon_{0}=\frac{\left(\text { coulomb }{ }^{2}\right)}{\left(\text { newton }-\mathrm{m}^{2}\right.}$
3. Here, $\frac{2 \pi}{\lambda}(c t-x)$ is dimensionless. Hence, $\frac{c t}{\lambda}$ is also dimensionless and unit of ct is same as that of $x$.

Therefore, unit of $\lambda$ is same as that of $x$. Also unit of $y$ is same as that of $A$, which is also the unit of $x$.
4. We know that the units of physical quantities which can be expressed in terms of fundamental units are called derived units. Mass, length and time are fundamental units but volume is a derived unit (as $V=L^{3}$ )
6.
$C R=\frac{q}{V} \times \frac{V}{l}=\frac{q}{q / t}=t$
$[\mathrm{CR}]=[\mathrm{T}]\left[\mathrm{M}^{0} \mathrm{~L}^{0} \mathrm{~T}\right]$
$[\mathrm{a}]=\left[\mathrm{PV}^{2}\right]$
$=\left[\frac{\mathrm{FV}^{2}}{\mathrm{~A}}\right]=\frac{\left[\mathrm{ML}^{-2} \mathrm{~T}^{6}\right]}{\left[\mathrm{L}^{2}\right]}=\left[\mathrm{MLT}^{5-2}\right]$
8.
$\mathrm{E}=\mathrm{hv}$ or $[\mathrm{h}]=\left[\frac{\mathrm{E}}{\mathrm{v}}\right]=\frac{\left[\mathrm{ML}^{2} \mathrm{~T}^{-2}\right]}{\left[\mathrm{T}^{-1}\right]}=\left[\mathrm{ML}^{2} \mathrm{~T}^{-1}\right]$
9. We know that dimension of velocity of light $[\mathrm{c}]=\left[\mathrm{M}^{0} \mathrm{LT}^{-1}\right]$; dimension of gravitational constant $[\mathrm{G}]=\left[\mathrm{M}^{1} \mathrm{~L}^{3} \mathrm{~T}^{-}\right.$ $\left.{ }^{2}\right]$ and dimension of Planck's constant $[\mathrm{h}]=\left[\mathrm{M}^{1} \mathrm{~L}^{2} \mathrm{~T}^{-2}\right]$. Solving the above three equations, we get; $[\mathrm{M}]=\left[\mathrm{c}^{1 /}\right.$ ${ }^{2} \mathrm{G}^{-1 / 2} \mathrm{~h}^{1 / 2}$.
12. $\frac{\Delta V}{\mathrm{~V}}=3 \times \frac{\Delta \mathrm{r}}{\mathrm{r}}=3 \times \frac{1}{100}=\frac{3}{100}=3 \%$
13. Given length $(\ell)=3.124 \mathrm{~m}$ and breadth $(\mathrm{b})=3.002 \mathrm{~m}$. We know that area of the sheet $(A)=\ell \times b=3.124 \times$ $3.002=9.378248 \mathrm{~m}^{2}$. Since, both length and breadth have four significant figures, therefore area of the sheet after rounding off to four significant is $9.378 \mathrm{~m}^{2}$.
14. $\frac{[\mathrm{h}]}{[1]}=\frac{[\mathrm{E} \lambda]}{[\mathrm{Cl}]}=\frac{\left[\mathrm{ML}^{2} \mathrm{~T}^{-2}\right][\mathrm{L}]}{\left[\mathrm{LT}^{-1}\right]\left[\mathrm{ML}^{2}\right]}$
$=\left[\mathrm{T}^{-1}\right]=$ [frequency].
15. Unit of energy $=[F]^{x}[A]^{y}[T]^{2}$
$[\mathrm{M}]^{1}[\mathrm{~L}]^{2}[\mathrm{~T}]^{-2}=\left[\mathrm{MLT}^{-2}\right]^{\mathrm{x}}\left[\mathrm{M}^{0} \mathrm{LT}^{-2}\right]^{\mathrm{y}}\left[\mathrm{M}^{0} \mathrm{~L}^{0} \mathrm{~T}^{1}\right]^{2}$
or $\quad[\mathrm{M}]^{1}[\mathrm{~L}]^{2}[T]^{-2}=\mathrm{M}^{\times} \mathrm{L}^{\mathrm{x}+\mathrm{y}} \mathrm{T}^{-2 x-2 y+z}$
For equality,
$x=1, x+y=2$ or $y=1$
$-2 x-2 y+z=-2$ or $z=2$
$\therefore \quad$ Unit of energy $=[F]^{1}[A]^{1}[T]^{2}$
16. $\mathrm{P}=\frac{\sqrt{\mathrm{abc}^{2}}}{\mathrm{~d}^{3} \mathrm{e}^{1 / 3}}$
$=\frac{\Delta \mathrm{P}}{\mathrm{P}} \times 100$
$=\left[\frac{1}{2} \times \frac{\Delta \mathrm{a}}{\mathrm{a}}+\frac{1}{2} \times \frac{\Delta \mathrm{b}}{\mathrm{b}}+\frac{\Delta \mathrm{c}}{\mathrm{c}}+3 \times \frac{\Delta \mathrm{d}}{\mathrm{d}}+\frac{1}{3} \times \frac{\Delta \mathrm{e}}{\mathrm{e}}\right] \times 100$
$=\left[\frac{1}{2} \times 2 \%+\frac{1}{2} \times 3 \%+2 \%+3 \times \%+\frac{1}{3} \times 6 \%\right]$
$=[1 \%+1.5 \%+2 \%+3 \%+2 \%]$
The minimum amount of error is contributed by the measurement of a.
17. $y=\frac{a^{4} b^{2}}{\left(c d^{4}\right)^{1 / 3}}$

Taking log on both sides,
$\log y=4 \log a+2 \log b-\frac{1}{3} \log c-\frac{4}{3} \log d$
Differentiating,
$\frac{\Delta y}{y}=4 \frac{\Delta a}{a}+2 \frac{\Delta b}{b}-\frac{1}{3} \frac{\Delta c}{c}-\frac{4}{3} \frac{\Delta d}{d}$
Percentage error in y ,
$\frac{\Delta y}{y} \times 100=4\left(\frac{\Delta a}{a} \times 100\right)+2\left(\frac{\Delta b}{b} \times 100\right)+\frac{1}{3}\left(\frac{\Delta c}{c} \times 100\right)+\frac{4}{3}\left(\frac{\Delta d}{d} \times 100\right)$
$=\left[4 \times 2 \%+2 \times 3 \%+\frac{1}{3} \times 4 \%+\frac{4}{3} \times \%\right]=22 \%$
18. $\mathrm{E}=\left[\mathrm{ML}^{2} \mathrm{~T}^{-2}\right], \mathrm{G}=\left[\mathrm{M}^{-1} \mathrm{~L}^{3} \mathrm{~T}^{-2}\right], \mathrm{I}=\left[\mathrm{MLT}^{-1}\right]$ and $\mathrm{M}=[\mathrm{M}]$
$\therefore$ Dimensions of $\frac{\mathrm{GIM}^{2}}{\mathrm{E}^{2}}$
$=\frac{\left[\mathrm{M}^{-1} \mathrm{~L}^{3} \mathrm{~T}^{-2}\right]\left[\mathrm{MLT}^{-1}\right]\left[\mathrm{M}^{2}\right]}{\left[\mathrm{ML}^{2} \mathrm{~T}^{-2}\right]}=[\mathrm{T}]$
19. Let $v \propto \sigma^{a} \rho^{b} \lambda^{c}$

Equation dimensions on both sides,
$\left[M^{0} L^{1} \mathrm{~T}^{-1}\right] \propto\left[\mathrm{MT}^{-2}\right]^{a}\left[\mathrm{ML}^{-3}\right]^{\mathrm{b}}[\mathrm{L}]^{\mathrm{c}}$
$\propto[M]^{a+b}[L]^{-3 b+c}[T]^{-2 a}$
Equation the powers of $\mathrm{M}, \mathrm{L}, \mathrm{T}$ on the both sides, we get;
$a+b=0$
$-3 b+c=1$
$-2 a=-1$
Solving, we get;
$a=\frac{1}{2}, b=-\frac{1}{2}, c=-\frac{1}{2}$
$\therefore \quad \mathrm{V} \propto \sigma^{1 / 2} \rho^{-1 / 2} \lambda^{-1 / 2}$
$\therefore \quad \mathrm{v}^{2} \propto \frac{\sigma}{\rho \lambda}$
20. $1 / 8$ th of the circumference $=\frac{360^{\circ}}{8}=45^{\circ}$

Change in velocity, $\sqrt{v^{2}+v^{2}-2 v^{2} \cos 45^{\circ}}=0.765 v$

## AVIRAL CLASSES

creating scholars
23. $[$ Energy density $]=\left[\frac{\text { Work done }}{\text { Volume }}\right]=\frac{\left[\mathrm{MLT}^{-2} . \mathrm{L}\right]}{\left[\mathrm{L}^{3}\right]}$
[Young's modulus $]=[\mathrm{Y}]=\left[\frac{\text { Force }}{\text { Area }}\right] \times \frac{[\ell]}{\Delta \ell}$
$=\frac{\left[\mathrm{MLT}^{-2}\right]}{\left[\mathrm{L}^{2}\right]} \cdot \frac{[\mathrm{L}]}{[\mathrm{L}]}=\left[\mathrm{ML}^{-1} \mathrm{~T}^{-2}\right]$
The dimensions of 1 and 4 are the same.
26. (a) $\vec{r}=x \hat{i}+y \hat{j}+z \hat{k} \quad \therefore r=\sqrt{x^{2}+y^{2}+z^{2}}$ $r=\sqrt{6^{2}+8^{2}+10^{2}}=10 \sqrt{2} \mathrm{~m}$
27. (a) $\vec{r}=20 \hat{i}+10 \hat{j} \quad \therefore r=\sqrt{20^{2}+10^{2}}=22.5 \mathrm{~m}$
28. (c) From figure, $\overrightarrow{O A}=0 \vec{i}+30 \vec{j}, \overrightarrow{A B}=20 \vec{i}+0 \vec{j}$

$\overrightarrow{B C}=-30 \sqrt{2} \cos 45^{\circ} \dot{i}-30 \sqrt{2} \sin 45^{\circ} \vec{j}=-30 \vec{i}-30 \vec{j}$
$\therefore$ Net displacement, $\overrightarrow{O C}=\overrightarrow{O A}+\overrightarrow{A B}+\overrightarrow{B C}=-10 \vec{i}+0 \vec{j}$

$$
|\overrightarrow{O C}|=10 \mathrm{~m}
$$

29. (a) An aeroplane flies 400 m north and 300 m south so the net displacement is 100 m towards north.

Then it flies $1200 m$ upward so $r=\sqrt{(100)^{2}+(1200)^{2}}$

$$
=1204 \mathrm{~m} \simeq 1200 \mathrm{~m}
$$

The option should be 1204 m , because this value mislead one into thinking that net displacement is in upward direction only.
30. (b) Total time of motion is $2 \mathrm{~min} 20 \mathrm{sec}=140 \mathrm{sec}$.

As time period of circular motion is 40 sec so in 140 sec . athlete will complete 3.5 revolution i.e., He will be at diametrically opposite point i.e., Displacement $=2 R$.
31. (c) Horizontal distance covered by the wheel in half revolution $=\pi R$.

So the displacement of the point which was initially in contact with ground $=A A^{\prime}=\sqrt{(\pi R)^{2}+(2 R)^{2}}$
$=R \sqrt{\pi^{2}+4}=\sqrt{\pi^{2}+4}$ (As $R=1 m$ )
32. (d) As the total distance is divided into two equal parts therefore distance averaged speed $=\frac{2 v_{1} v_{2}}{v_{1}+v_{2}}$
33.
(d) $\frac{v_{A}}{v_{B}}=\frac{\tan \theta_{A}}{\tan \theta_{B}}=\frac{\tan 30^{\circ}}{\tan 60^{\circ}}=\frac{1 / \sqrt{3}}{\sqrt{3}}=\frac{1}{3}$
34.
(b) Distance average speed $=\frac{2 v_{1} v_{2}}{v_{1}+v_{2}}=\frac{2 \times 20 \times 30}{20+30}$
$=\frac{120}{5}=24 \mathrm{~km} / \mathrm{hr}$
35. (b) Distance average speed $=\frac{2 v_{1} v_{2}}{v_{1}+v_{2}}=\frac{2 \times 2.5 \times 4}{2.5+4}$
$=\frac{200}{65}=\frac{40}{13} \mathrm{~km} / \mathrm{hr}$
36. (c) Distance average speed $=\frac{2 v_{1} v_{2}}{v_{1}+v_{2}}=\frac{2 \times 30 \times 50}{30+50}$
$=\frac{75}{2}=37.5 \mathrm{~km} / \mathrm{hr}$
37. (d) Average speed $=\frac{\text { Total distance }}{\text { Total time }}=\frac{x}{t_{1}+t_{2}}$
$=\frac{x}{\frac{x / 3}{v_{1}}+\frac{2 x / 3}{v_{2}}}=\frac{1}{\frac{1}{3 \times 20}+\frac{2}{3 \times 60}}=36 \mathrm{~km} / \mathrm{hr}$
38. (a) Time average speed $=\frac{v_{1}+v_{2}}{2}=\frac{80+40}{2}=60 \mathrm{~km} / \mathrm{hr}$.
39. (b) Distance travelled by train in first 1 hour is 60 km and distance in next $1 / 2$ hour is 20 km .

So Average speed $=\frac{\text { Total distance }}{\text { Total time }}=\frac{60+20}{3 / 2}$
$=53.33 \mathrm{~km} /$ hour
40. D
41. (c) Total distance to be covered for crossing the bridge
$=$ length of train + length of bridge
$=150 \mathrm{~m}+850 \mathrm{~m}=1000 \mathrm{~m}$
Time $=\frac{\text { Distance }}{\text { Velocity }}=\frac{1000}{45 \times \frac{5}{18}}=80 \mathrm{sec}$
42. (c) Displacement of the particle will be zero because it comes back to its starting point

Average speed $=\frac{\text { Total distance }}{\text { Total time }}=\frac{30 \mathrm{~m}}{10 \mathrm{sec}}=3 \mathrm{~m} / \mathrm{s}$
43. (d) Velocity of particle $=\frac{\text { Total diplacement }}{\text { Total time }}$
$=\frac{\text { Diameter of circle }}{5}=\frac{2 \times 10}{5}=4 \mathrm{~m} / \mathrm{s}$
44. (d) A man walks from his home to market with a speed of $5 \mathrm{~km} / \mathrm{h}$. Distance $=2.5 \mathrm{~km}$ and time $=\frac{d}{v}=\frac{2.5}{5}=\frac{1}{2} \mathrm{hr}$.
and he returns back with speed of $7.5 \mathrm{~km} / \mathrm{h}$ in rest of time of 10 minutes.
Distance $=7.5 \times \frac{10}{60}=1.25 \mathrm{~km}$
So, Average speed $=\frac{\text { Total distance }}{\text { Total time }}$
$=\frac{(2.5+1.25) \mathrm{km}}{(40 / 60) \mathrm{hr}}=\frac{45}{8} \mathrm{~km} / \mathrm{hr}$.
45.
(b) $\frac{\mid \text { Average velocity } \mid}{\mid \text { Average speed } \mid}=\frac{\mid \text { displacement } \mid}{\mid \text { distance } \mid} \leq 1$
because displacement will either be equal or less than distance. It can never be greater than distance.

## [CHEMISTRY]

46. 
47. 

$l=3$ stands for $f$-subshell that can accomodate at the maximum 14 electrons.
48.
49.
50.
$l=3(f$-subshell $) \Rightarrow(2 l+1)$, i.e., 7 orbitals.
51.
$r=\frac{0.529 n^{2}}{Z} \AA \Rightarrow A=2 \pi\left(\frac{0.529 n^{2}}{Z}\right)^{2}$
$\frac{A_{2}}{A_{1}}=\frac{\left(2^{2}\right)^{2}}{\left(1^{2}\right)^{2}}=16: 1$
52.
53.
(ii) $l=2$ is not allowed for $n=2$.
(iv) $m=-1$ is not allowed for $l=0$.
(v) $m=3$ is not allowed for $l=2$.
54.

A subshell has $(2 l+1)$ orbitals and $2(2 l+1)$, i.e., $(4 l+2)$ electrons.
55.

For $l=2, m$ value ' -3 ' is not possible.
56.

KE per atom $=\frac{\left(4.4 \times 10^{-19}\right)-\left(4.0 \times 10^{-19}\right)}{2}=\mathbf{2 . 0} \times \mathbf{1 0}^{-\mathbf{2 0}} \mathbf{J}$

## AVIRAL CLASSES

CREATING SCHOLARS
57.

$2 p^{4}$ is | $\uparrow \downarrow$ | $\uparrow$ | $\uparrow$ |
| :--- | :--- | :--- | with two unpaired electrons.

58. 

$\mathrm{Co}^{3+}, Z=27$ has V.S. electronic configuration $3 d^{6}$.
59.

It is according to Aufbau principle, or $7 s 6 f 5 d 7 p$.
60.

Orbital angular momentum

$$
\begin{aligned}
& =\sqrt{l(l+1)} \times \frac{h}{2 \pi} \\
& =\sqrt{1(1+1)} \times \frac{h}{2 \pi} \quad(\text { For } p, l=1) \\
& =\sqrt{2} \times \frac{h}{2 \pi}=\frac{\mathbf{h}}{\sqrt{2} \pi}
\end{aligned}
$$

61. 

Valence electron is $5 s^{1}$
$\Rightarrow \quad n=5, l=0, m=0, s=+\frac{1}{2}$
62.
$n=4, l=3 \quad \Rightarrow 4 f$ subshell
Total electrons $=2(2 l+1)$

$$
=2 \times(2 \times 3+1)=\mathbf{1 4}
$$

63. 

The set of quantum number

$$
n=3, l=1, m=-1
$$

stands for a single $p$-orbital which will have at the most $\mathbf{2}$-electrons.
64.
$m=0$, represents only one orbital.
65.
$\operatorname{Cr}(Z=24): 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{5} 4 s^{1}$
Total electrons in $l=1$, i.e., $p$-subshell $=6+6=\mathbf{1 2}$
Total electrons in $l=2$, i.e., $d$-subshell $=\mathbf{5}$.
66.
$\mathrm{Cr}^{2+}: 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{4}: d$-electrons $=4$
$\mathrm{Ne}: 1 s^{2} 2 s^{2} 2 p^{6}: s$-electrons $=2+2=4$
$\mathrm{Fe}: 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{6} 4 s^{2}: d$-subshell has 4 unpaired clectrons.
$\mathrm{O}: 1 s^{2} 2 s^{2} 2 p^{4}: p$-electrons $=4$
$\mathrm{Fe}^{3+}: 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{5}: d$-electrons $=5$
67.
' $n+l$ ' rule is not applicable to H -atom. Energy system is

$$
1 s<2 s=2 p<3 s=3 p=3 d<\ldots
$$

So, energy in H -atom is related with $\boldsymbol{n}$ value only.
68.
$\mathrm{F}(Z=9): 1 s^{2} 2 s^{2} 2 p_{x}^{2} 2 p_{y}^{2} 2 p_{z}^{2} \quad$.
$9^{\text {th }}$ electron is $2 p_{y}^{\prime}$, which has $n=2, l=1, m= \pm 1$ (By convention, for $p_{x}$ and $p_{y}$ ),
$s=+\frac{1}{2}$ or $-\frac{1}{2}$.
69.

Number of spherical or radial nodes is $(n-l-1)$.
For $1 s, n-l-1=1-0-1=0 \quad$ For $2 p, n-l-1=2-1-1=0$
For $3 d, n-l-1=3-2-1=0 \quad$ For $4 f, n-l-1=4-3-1=0$
$\mathbf{T i}^{\mathbf{2 +}}(Z=22), \mathbf{V}^{\mathbf{3 +}}(Z=23), \mathbf{C r}^{\mathbf{4 +}}(Z=24)$ and $\mathbf{M} \mathbf{n}^{5+}(Z=25)$ have same electronic
configuration $[\mathrm{Ar}] 3 d^{2}$. They have the same number of $3 d$-electrons, i.e., 2 .
71.

$$
\begin{aligned}
\frac{(\Delta x \cdot m \cdot \Delta v)_{e}}{(\Delta x \cdot m \cdot \Delta v)_{p}} & =\frac{h / 4 \pi}{h / 4 \pi}=1 \\
\frac{m_{e} \cdot \Delta v_{e}}{m_{p} \cdot \Delta v_{p}} & =\mathbf{1} \\
\frac{\Delta v_{e}}{\Delta v_{p}}=\frac{m_{p}}{m_{e}} & =\mathbf{1 8 3 6}: \mathbf{1}
\end{aligned}
$$

$\mathrm{Mn}^{2+}$ due to presence of five unpaired ele electrons has maximum magnetic moment.
